Notes:

- 1) Intersections are calculated above 0.15 g/t Au cut-off.
- 2) The Company is unaware of any drilling, sampling or recovery factors that could materially affect the accuracy or reliability of the data presented above.
- 3) Fire Assay result.

FINAL ASSAY TABLE – Press Release Dated 16Oct24

“Spanish Mountain Gold Provides 2024 Drill Program Update with Initial Results that Confirm Mineralization Extensions”

Table 1: 2024 Drill Program Results – Final Results

Drillhole ID	From	To	True Width (m)	Gold Grade (g/t Au)
24-DH-1267	638.15	639.50	1.35	0.48
24-DH-1267	639.50	641.00	1.50	0.12
24-DH-1267	641.00	642.60	1.60	0.18
24-DH-1267	642.60	643.90	1.30	(0.05)
24-DH-1267	643.90	645.50	1.60	0.43
24-DH-1267	645.50	647.00	1.50	0.11
24-DH-1267	647.00	648.50	1.50	0.10
24-DH-1267	648.50	650.00	1.50	0.38
24-DH-1267	650.00	651.50	1.50	0.17
24-DH-1267	651.50	652.50	1.00	0.43
24-DH-1267	652.50	653.80	1.30	0.14

Notes:

- 1) Intersections are calculated above 0.15 g/t Au cut-off.
- 2) These results were released as preliminary data which have now been fully validated.
- 3) The Company is unaware of any drilling, sampling or recovery factors that could materially affect the accuracy or reliability of the data presented above.

Drill Core Processing, Data Verification and Quality Assurance – Quality Control Program (QA/QC)

Once received from the drill and processed, all drill core samples are sawn in half, labeled, and bagged. The remaining half of the drill core is securely stored on-site. Numbered security tags are applied to sample shipments to ensure chain of custody compliance. The Company inserts quality control (QC) samples at regular intervals, including blanks and reference materials, with all sample shipments to monitor laboratory performance. The QA/QC program is overseen by the Company’s Qualified Person, Julian Manco, P.Geol, Director of Exploration (as described below).

Drill core samples are submitted to ALS Geochemistry's analytical facility in Kamloops, British Columbia, for preparation with analysis performed in Vancouver. The ALS facility is accredited to the ISO/IEC 17025

standard for gold assays, with all analytical methods incorporating quality control materials at defined frequencies and established data acceptance criteria. ALS Geochemistry is independent of the Company.

Each entire sample is crushed, and a 1 kg portion is pulverized. Gold analysis is conducted using a 30 g fire assay fusion with an atomic absorption (AAS) finish, with detection limits ranging from 0.005 ppm to 10 ppm. Also, Au Screen 30 g FA, 1 kg, 100 - 106 μm method is used with detection limits ranging from 0.05 ppm to 10%. Overlimit gold values are analyzed by fire assay with a gravimetric finish.

The samples are also subjected to a 34-element geochemical analysis using a 4-acid digestion, followed by Inductively Coupled Plasma Atomic Emission Spectroscopy (ICP-AES). Results are reviewed by Spanish Mountain's geologists using ALS's QCPro™ software to ensure quality assurance before disclosure. ALS is independent of the Company.

Julian Manco, M.Sc., P.Ge., has thoroughly verified the data disclosed in this news release. The data verification process involved a multi-step approach to ensure accuracy and integrity. This included a detailed quality control (QC) analysis of the data, which was performed using both internal and external platforms, such as the QCPro™ software. These QC checks involved the analysis of certified reference materials (CRMs), blanks, and duplicates to confirm the reliability of the assay results. In addition, Mr. Manco conducted a field inspection of the specific drill intervals mentioned in this release to directly observe the geological features and verify the nature of the results presented.

Qualified Person

Julian Manco, M.Sc, P.Ge., Director of Exploration with Spanish Mountain Gold, is the Qualified Person as defined under National Instrument 43-101 who has reviewed and approved the contents of this document.
